

DNA Ladders

Omega Biotek offers a wide range of products for the accurate size and mass determination of DNA. Most of DNA Ladders includes one or two higher-intensity bands for easy identification and orientation. The ladders are supplied premixed with loading buffer and are stable at room temperature for a few weeks. There is no need to heat, mix, or dilute ladders prior to loading them on gel.

DL2000 DNA Marker

- CAT.No.: M10-01
- Packing: 250 ul
- Concentration: 0.0492ug/ul
- Store: at 4°C for periods up to 6 months. For longer periods store at -20°C.
- Description: DL2000 DNA Marker is designed for the fast sizing and approximate quantification of double-stranded DNA fragments. The band pattern is excellent separated under a wide range of electrophoresis conditions in agarose gels. The ladder is mixtures of six purified individual DNA fragments (in base pairs): 2000, 1000, 750, 500, 300, 100.
- Direction:
 - ✧ This product can load directly, since it contains 1× loading buffer. It is free of fluorescence dye such as EtBr.
 - ✧ For a loading well less than 6mm in width, 5ul of this product is enough for clear bands. For a wider well, more product may be required.
 - ✧ Gel and buffer may effect the electrophoresis. For better result, please use high quality agarose and fresh running buffer. 1% agarose gel is recommended.
